

TRANSLYFT and Bijé Fritid & Camping in collaboration

Bijé Fritid & Camping in Helsingør, Denmark is a big company who sell everything needed for camping life, which includes camping trailers and repairation of these. It was for this purpose they needed a solution for raising and lowering caravan trailers during repairation

Bijé Fritid & Camping contacted Translyft and in close collaboration with the customer a lifting table for installation in a pit was constructed. The pit is 1,8 m. deep and can lower the trailers down to 1,4 m. below floor level, which makes it easier for the employees to change the roof, the skylight or carry out other types of repairations on the trailers.

The lifting table can raise to 0,6 m above the floor for convenient and correct working position for the employees when carrying out repairations on the lower part of the trailers.

To ensure complete stability of the lifting table in floor level and to avoid that the table drops when the trailers are being manoeuvred onto the table, it can be locked mechanically when raising the hydraulic operated supporting legs.

Technical details, lifting table:

Capacity:	6000 kg
Top plate:	8000 x 2600 mm
Travel:	2000 mm
Closed height:	420 mm
