Newsletter, July 2011

TRANSLYFT has constructed and installed a Mast lift at AED Rent in England.

AED Rent are Europe's biggest rental company for music and video production equipment.

The mast lift is installed in their new warehouse and will be used for lifting lighting trusses and flight cases etc. up and down from a 3 m. high mezzanine floor.

When Translyft were approached to supply a work positioning solution to enable engineers to position large aircraft parts for construction at the Boeing factory, we specified special lift tables with a tilting top to improve safety and efficiency.

With this solution the workers are able to raise and lower the aircraft parts safely and quickly to a required angle, so their working position is optimum and back strain injuries are avoided.
