TRANSLYFT NEWS – MAST LIFT

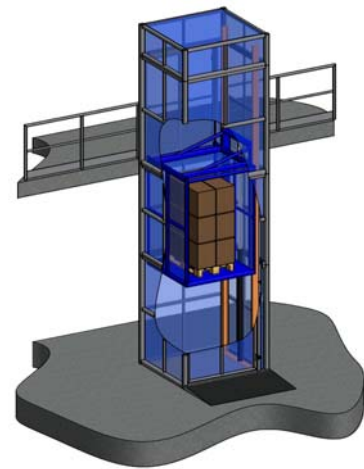

Goods lifts based on scissor lifting tables have in several years been an important parts of the Translyft's program.

Prototype during construction

An increase in the demand for goods lifts with compact dimensions and high travel has resulted in the developing of a TRANSLYFT MAST LIFT.

MAST LIFT is designed for transport of goods between two fixed levels and can be installed most places, since the lift does not need to be installed in a pit.

Advantages of the MAST LIFT:

- * Compact dimensions but with high travel and capacity
- * Flexible and easy to place construction, which easily can be adapted into the customer's actual needs
- * Low installations cost – no pit and no concrete work is necessary
- * Will be delivered complete with shaft and doors
- * Strong and fully tested construction
- * Easy maintenance and service
- * Constructed and produced at TRANSLYFTs factory in Denmark
- * Approved acc. to current regulation and with complete documentation

MAST LIFT installed in Norway

We wish you all a merry Christmas and a happy and successful new year
